

Fire Suppression Systems Managing Risks Together

As an advice-led insurer, we're committed to helping farmers, growers, and provincial businesses avoid disruption and minimise losses – reducing stress, lost production, and downtime.

Fire damage is one of the biggest risks facing plant and equipment. FMG recommends that you take a look at industry specialists Fire Safety Equipment (FSE), who provide fire suppression solutions to protect your high-value assets, critical infrastructure, and people.

Benefits of Fire Suppression Systems

Investing in preventative technology can reduce the damage caused by fire through early detection and suppression. This can significantly reduce the risk of harm to people, equipment losses, and operational disruption.

- Early detection
- Early suppression
- Environmentally friendly
- Cost effective

“Installing localised suppression systems inside key switchboards and plant controllers provides additional mitigation and sound risk management when protecting electrical supplies and the equipment/plant they service. The localised suppression system can be the difference between a small fire that can be managed and a large fire that can lead to a significant loss.”

- DAN LUCAS, RISK MANAGEMENT SPECIALIST

What is a fire suppression system?

Fire suppression systems are automatic extinguishers fitted to key electrical enclosures such as switchboards or control panels. This is where fires can start from faulty equipment, damaged wiring, or improper installation. Fire in these enclosures can be difficult to identify until it is too late. The fire extinguishing agent is automatically released when the sensors are exposed to flames or high ambient temperatures. They require no external power for detection or operation, making them ideal for automated or unsupervised applications.

Who is FSE?

FSE is a specialist importer, providing quality fire suppression, fire fighting, fire protection, and fire safety products to New Zealand. They have extensive experience and cater to small provincial businesses and large commercial operations.

What is the offer?

As an FMG client you will receive a 10% discount on the provision and installation of a fire suppression system. FSE will work closely with you to determine the most suitable product for your specific risks—from readymade kits to bespoke systems. FSE can work with your site electricians or use their network of nationwide installers.

On guard 24 hours a day, 365 days a year.
